

# What NOT to Flush

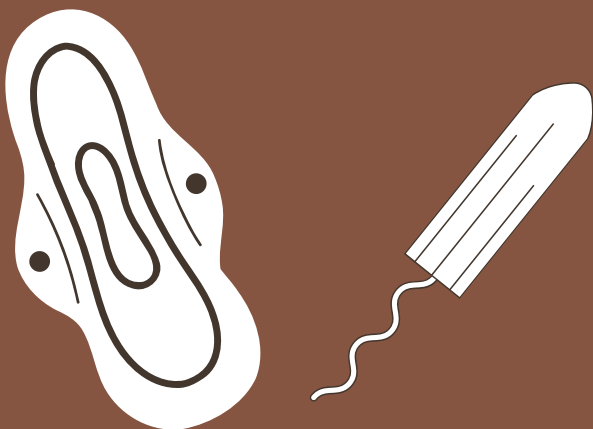

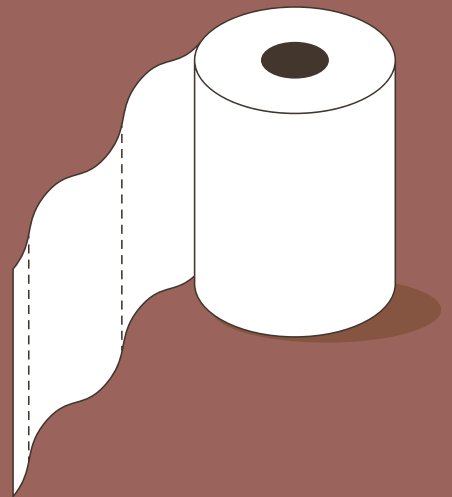

## Flushable Wipes

They say that “flushable” wipes are flushable because they are more degradable than regular wipes, but they still clog your system just as much.

## Paper towels

Paper towels of all kinds are way too thick to go down the piping. This causes clogs.

## Feminine Products

No feminine products are degradable enough to be flushed. It may not seem like it right away, but these build up and cause future problems.

## Anything else other than these 3 things...

Number 1. Your number 1.  
Number 2. Your number 2.  
Number 3. Toilet paper.
